

Muhammed Shiyas C

Full Stack Developer — .NET & Angular

shiyasmuhammed541@gmail.com | +91 9778255714 | Malappuram, Areekode, Kerala

[GitHub](#) | [LinkedIn](#)

Professional Summary

Full Stack Developer with hands-on experience in Angular and ASP.NET Core, specializing in building scalable web applications and high-performance backend services. Proficient in .NET Core, Entity Framework, and SQL Server, with a strong focus on clean architecture, efficient database design, and maintainable code. Experienced in Agile development environments and collaborative team workflows.

Technical Skills

Programming: C#, JavaScript, TypeScript, SQL, HTML5, CSS3

Backend: ASP.NET Core, Entity Framework Core, Dapper, ADO.NET, RESTful Web Services, LINQ

Database: MS SQL Server, Stored Procedures, Query Optimization

Frontend: Angular, Tailwind CSS, Bootstrap

Tools & DevOps: Docker, Redis, Git, GitHub, Visual Studio, VS Code, SSMS

Real-time & Communication: SignalR (WebSockets), WebRTC (Peer-to-Peer Video/Audio).

Concepts: OOP, Clean Architecture, Service Integration, Performance Optimization, Agile/Scrum

Soft Skills: Team Collaboration, Problem Solving, Adaptability, Time Management

Professional Experience

Full Stack Developer Intern – Bridgeon Solutions LLP, Calicut

Aug 2025 – Present

- Engineered 30+ web API endpoints using ASP.NET Core and C#.
- Improved database performance by 20–30% through optimized SQL queries.
- Designed and managed SQL Server tables to support application features.
- Integrated backend APIs with Angular components for reliable data flow.
- Developed reusable and responsive UI components using Angular and Tailwind CSS.
- Implemented JWT authentication to secure backend services.

Projects

Voltex – E-Commerce Platform for Premium Gaming Gadgets

- Developed a scalable full-stack e-commerce platform supporting products, cart, orders, and Wishlist.
- Built secure API endpoints using **ASP.NET Core** with **JWT authentication** and **role-based authorization**.
- Assembled admin modules for managing users, products, categories, orders, and inventory.
- Integrated APIs with **Angular** frontend using **NgRx** for efficient state management.
- Designed and refined SQL Server schema with **EF Core** for performance and maintainability.
- Tested and validated APIs using Swagger.

CodeInterviewPro

- **Architected and developed** a high-performance technical interview platform using **.NET Clean Architecture** and **Angular**, supporting real-time code synchronization via **SignalR**.
- **Implemented a secure multi-language code execution engine** using **Docker**, allowing candidates to run C#, Python, Java, Go, and JavaScript code in isolated environments.
- **Integrated Google Gemini AI** to automate candidate feedback, providing deep insights into code performance, correctness, and hiring suitability.
- **Leveraged Microsoft CodeBERT** via a Python microservice to perform semantic code analysis and logic verification.
- **Developed a real-time video/audio interview room** using **WebRTC**, enabling seamless communication between recruiters and candidates.
- **Built an automated scoring and plagiarism detection system** that analyzes code similarity and algorithmic complexity to ensure assessment integrity.

AI Integration & Features

The project stands out due to its multi-layered AI evaluation system:

1. **Google Gemini (Gemini 1.5 Flash):**
 - **Role:** Acts as a "Senior Technical Interviewer."
 - **Function:** Generates automated technical feedback, evaluates algorithmic correctness, performance, and code quality, and provides a final hiring recommendation based on the candidate's implementation.
2. **Microsoft CodeBERT:**
 - **Role:** Semantic Code Understanding.
 - **Function:** Integrated via a FastAPI (Python) microservice to analyze code embeddings, detecting patterns and semantic logic that traditional static analysis might miss.
3. **Intelligent Evaluation Pipeline:**
 - **Complexity Analysis:** Automated Big O notation detection ($O(n)$, $O(n^2)$, etc.).
 - **Code Smell Detection:** Identifying anti-patterns like nested loops, long methods, or missing data structures (e.g., suggesting a Dictionary for lookups).
 - **Plagiarism Detection:** A custom CodeSimilarityService that compares candidate submissions against historical data to ensure originality.
4. **AI-Generated Reporting:**
 - Consolidates feedback from Gemini, CodeBERT, and static analyzers into a professional PDF report for HR, including a skill assessment score and performance metrics.

Education

Bachelor of Science in Computer Science

University of Calicut

2022 – 2025
